Bruno Henrique Nunes

Applied AI / Machine Learning Engineer | Data Science

Brazil | Open to remote opportunities hiring from Brazil

bruno.nunes.1987@gmail.com | github.com/bhnunes | linkedin.com/in/brunohenriquenunes

Professional Summary

Applied AI and Machine Learning Engineer with a completed MSc in Artificial Intelligence from the University of Campinas (UNICAMP). Develop AI agents, multi-agent workflows and LLM applications using RAG, NLP and prompt engineering. Combine Python and API engineering, LLM evaluation, automated testing and observability with reproducible deep-learning research and statistical analysis.

Technical Skills

Applied AI and LLM engineering: Python, AI agents, multi-agent systems, large language models (LLMs), retrieval-augmented generation (RAG), Natural Language Processing (NLP), prompt engineering, LLM evaluation, semantic search, text embeddings.

Machine learning and Data Science: PyTorch, deep learning, computer vision, statistical analysis, experiment design, confidence intervals, data quality, topic modeling, Apache Spark.

Software engineering: FastAPI, REST APIs, automated testing, observability, AWS Lambda, AWS Simple Email Service (SES), Git, Azure DevOps CI/CD.

Professional Experience

Data Scientist — IBM Aug 2026 – Present

- Build Python-based AI agents and multi-agent workflows for applied AI, software engineering and Data Science use cases.
- Develop retrieval-grounded LLM applications with RAG, NLP, evidence retrieval, prompt engineering and Python/FastAPI REST APIs.
- Implement prompt-injection defenses, output guardrails, automated testing and observability; support application deployment.

Assistant Professor — UNICAMP Jul 2024 – Dec 2025

Supported more than 200 undergraduate students in database management and object-oriented programming; led problem-solving sessions in SQL, relational algebra and OOP and supported assessment. Internship appointment.

Senior Software Engineer — PAteam Jan 2024 – May 2024

Built Python data-ingestion automation using AWS Lambda, REST APIs and AWS SES.

Senior Software Engineer — Expleo Group May 2022 – Aug 2023

- Built Python/Robocorp automation and API integrations for a legacy-to-Salesforce migration using Salesforce REST APIs and SQL Server; documented workflows and supported Azure DevOps CI/CD, monitoring and issue resolution.

Senior Software Engineer — Nestlé Feb 2022 – Aug 2023

- Delivered 13 enterprise automations using Python, Blue Prism, PowerShell, SQL and Automation Anywhere; reviewed code across 10+ projects, mentored developers and supported change approval for more than 50 robots.

Senior Software Engineer — Deloitte Nov 2021 – Feb 2022

Translated stakeholder requirements into Python, Node.js and UiPath automation for a healthcare IoT integration project; presented solutions to clients and suppliers.

IBM — Earlier roles

RPA Developer (Oct 2019 – Nov 2021); Software Developer (Oct 2018 – Oct 2019); IT Analyst (Jan 2017 – Oct 2018); Support Specialist (Jan 2012 – Oct 2014).

- Delivered automations and integrations with Python/Selenium, APIs, SAP, Db2, Cloudant, Blue Prism, VBA and JavaScript.
- Created invoice analytics with VBA and Power Query for 20,000+ records and 10+ validation KPIs; reported processing time fell from more than three hours to about six minutes.
- Used SQL for compliance checks and billing-adjustment reporting; provided English-language support to clients in the United States and Canada.

Selected Research and Projects

Deep Learning for Prostate Histopathology Feb 2024 – Sep 2026

Master's research, University of Campinas (UNICAMP)

- Developed a research pipeline for binary segmentation of prostate cancer in histopathological images, using CNN/Transformer-based modeling and PyTorch.
- Implemented data preparation and quality control, patient-level data partitioning, model training, ensemble optimization and final evaluation.
- Preserved configurations, data provenance and experimental outputs to support reproducibility. The REDU deposit contains generated research artifacts; original DIAGSET images are not redistributed.

Code: github.com/bhnunes/Master_Coding | Artifacts: doi.org/10.25824/redu/EDPCF2

GEODITE — Equivariant Interatomic Potentials

Contributed to model implementation, training and evaluation for an equivariant message-passing model for interatomic potentials. Co-author of *Equivariant Interatomic Potentials without Tensor Products* (arXiv preprint, January 2026).

arxiv.org/abs/2601.15492

Selected 2026 Applied AI and Data Science Projects

- **LLM response quality:** Combined lexical metrics, semantic similarity, NLP and text embeddings with model-assisted judgment for ambiguous cases.
- **AI agent engineering and evaluation:** Built Python tooling for multi-agent software-engineering workflows with repository-aware guidance and automated tests; designed paired statistical analyses using the Wilcoxon signed-rank test, bootstrap confidence intervals and token-use measures.
- **Applied Data Science and NLP:** Prototyped RAG-supported analysis, multilingual text classification and semantic search; applied data validation, topic modeling, statistical metric design, Apache Spark and telemetry enrichment with REST APIs, PostgreSQL and Kubernetes.

Education

MSc in Artificial Intelligence — University of Campinas (UNICAMP) 2024 – 2026

Completed September 2026; research in deep learning for prostate histopathology.

MBA in Software Architecture and Engineering — FIA Business School 2022 – 2023

Bachelor's in Engineering Physics / Applied Physics — University of São Paulo 2006 – 2010

Selected Certifications

AWS Certified Generative AI Developer – Professional (Oct 2026)

AWS Certified Machine Learning Engineer – Associate (Jul 2026)

AWS Certified Developer – Associate (Oct 2025)

AWS Certified Solutions Architect – Associate (Apr 2025)

Languages

Portuguese: Native. **English:** Full professional proficiency; TOEIC Listening and Reading: 890 (Sep 2025).
Spanish and Italian: Elementary.
